

RACE RESULT LOOPBOX.

The **revolutionary new way** to collect **split times!**

The stand-alone LoopBoxes at close-by split timing points will repeat detections wirelessly to the main system. In case of remote timing points, the ActivePro transponder saves the passing time and then transmits them when arriving at the finish.

■ Easy Setup

No wiring needed between main system and split timing points.

■ Small Investment

For an additional timing point, you only need a LoopBox instead of a complete timing system.

■ Stand-alone

With its internal battery, the LoopBox can run for 12 - 20 hours.

■ Repeat Mode range of up to 900 m

■ 3.5 mm input-/output-plug

Audio output or start impulse input
