

RACE RESULT USB TIMING BOX.

The **smallest & most cost-effective** timing system in the world!

The USB Timing Box enables you to setup your timing line in a split second!

Directly connected to a computer, the USB Timing Box does not require a decoder.

The USB Timing Box is used best to time sporting events, to scan tags at race pack pick-up, or for just about any other application. The open-source software of the USB Box allows you to develop any solution that may have nothing to do with sports timing.

- Wireless reception of split times from a Loop Box
- 100 % detection rate
- Open Software Development Kit
- 1000 detection internal memory
- Internal backup battery for 12 h
- Highest clock stability on the market: 0.28 ppm
- Compatible with all race result active devices
- Repeatable accuracy of 1/100th
- Works with low end computers
- Loop power can be set by user
