

HuTag

The RACE RESULT HuTag is a reusable passive transponder built for precise timing at various types of events. Worn on the ankle with a neoprene strap, it delivers accuracy of up to 0.2 seconds.

Features

- Passive technology: No battery required, maintenance-free
- Secure, comfortable fit: Neoprene strap keeps the transponder firmly in place and visible throughout the race
- Cost-effective: Compared to active transponders, HuTags are lower priced, yet less accurate and more water-sensitive

Precautions

- Main and backup timing lines are recommended, particularly at key timing points such as the finish line
- Keep timing points away from water, as passive transponders are water-sensitive
- The transponder must stay visible and not be covered by a wetsuit or strap
- Set your Ubidium timing system to HuTag mode for optimal read rates

HuTag – Technical Specifications	
Max. speed	40 km/h
Accuracy	up to 0.2 s
Dimensions	50 x 44 x 12 mm
Weight	24 g
Operating Temperature	-40° C to +85° C
Frequency Range (MHz)	red version (EU / ETSI): 866-868 MHz blue version (US / FCC): 902-928 MHz
Compliance	CE-compliant
IP Rating	IP68
Chip	Impinj M730
EPC	128 bits
Material (encasement)	Over-molded UV resistant TPE
